2 Resuming the training after sagemaker crash

- Since sagemaker crashed multiple times, we had to resume the training multiple times. We always resume from the last saved checkpoint
- Because we had to resume the training so many times, the patience got reset upon each resume. Because of that, the training kept going even tho the validation accuracy was not improving anymore (as seen in the graphs bellow), and that's why we stopped training after ~150 epochs. The training also took 14+ hours...

3 Visualise the training

As we can see, the training loss curve seem to be a little weird. I assume this is because we had to resume the training multiple times. This, however, isn't an issue, since the training seems to have converged appropriately
