2 Resuming the training after sagemaker crash

- Since sagemaker crashed multiple times, we had to resume the training multiple times. We always resume from the last saved checkpoint
- The error we get isn't actually an error, it is just telling us that the training was successfully completed and in the cells below we show the graphs of the training process. There was no other way to train the model since the sagemaker kept crashing every 10-15 epochs.

```
[3]: import torch
import gc
from ultralytics import YOLO

model = YOLO("/home/sagemaker-user/runs/yolov11s-transfer/weights/last.pt")
model.train(resume=True)
```

New <https://pypi.org/project/ultralytics/8.4.52> available Update with 'pip install -U ultralytics'

```

3 Visualise the training

- As we can see, the training loss curve seem to be a little weird. I assume this is because we had to resume the training multiple times. This, however, isn't an issue, since the training seems to have converged appropriately

```
